

IncidentCam

Cloud-Based System

Front, rear and driver facing cameras

Reduce accidents and protect your fleet against fraudulent claims with the next generation cloud-based IncidentCam. Watch an incident unfold in front of your eyes, minutes after it happened.

INSTANT ALERTS

Receive automated video footage and a detailed FNOL report by email upon event trigger. Avoid timely and often impractical SD card retrieval from other camera systems, instead giving you incident evidence as it happens.

INSURANCE REDUCTION

Video evidence supports non-fault road traffic incidents and expedites claim settlements, leading to future savings on premiums that can run into hundreds of pounds per vehicle.

DRIVER TRAINING

Receive automated video footage and a detailed FNOL report by email upon event trigger. Avoid timely and often impractical SD card retrieval from other camera systems, instead giving you incident evidence as it happens.

ON DEMAND

Download driving footage remotely from your desktop and analyse more of your fleet activity, following up on recent non-incident related events.

Features

- + HD quality footage
- + Monitor driver behaviour
- + Latest crash technology
- + Integrated tracking
- + Archived footage
- + No SD card required
- + Remote download capability
- + In-cab panic button to protect your drivers
- + Video footage for accidents, harsh braking and acceleration
- + Footage delivered immediately to the fleet manager
- + 40 hours of driving footage captured
